# Array Practice Assignment (Real-Life Based)

**Problem 1: Student Marks Management System**

A school wants to store marks of 10 students in an array.

**Task:**

1. Take marks of 10 students as input.
2. Find total marks.
3. Find average marks.
4. Find highest marks.
5. Find lowest marks.

**Sample Input:**

78 65 90 88 45 67 92 76 81 55

**Expected Output:**

Total Marks = 737
Average Marks = 73.7
Highest Marks = 92
Lowest Marks = 45

---

**Problem 2: Weekly Expense Tracker**

A person records his expenses for 7 days.

**Task:**

1. Store daily expenses in an array.
2. Calculate total weekly expense.
3. Find the day with the highest expense.
4. Find the day with the lowest expense.

**Sample Input:**

500 700 300 900 400 800 600

**Expected Output:**

Total Expense = 4200
Highest Expense = 900
Lowest Expense = 300

---

**Problem 3: Classroom Attendance System**

A teacher stores attendance of students.

1 = Present
0 = Absent

**Task:**

1. Take attendance of 20 students.
2. Count total present students.
3. Count total absent students.
4. Calculate attendance percentage.

**Sample Input:**

1 1 0 1 1 0 1 1 1 0

**Expected Output:**

Present Students = 7
Absent Students = 3
Attendance Percentage = 70%

---

**Problem 4: Online Shopping Orders**

An e-commerce company stores daily orders received in a week.

**Task:**

1. Store 7 days orders in an array.
2. Find total orders.
3. Find maximum orders in a day.
4. Count days where orders were more than 100.

**Sample Input:**

80 120 95 140 110 75 130

**Expected Output:**

Total Orders = 750
Maximum Orders = 140
Days Above 100 Orders = 4

---

**Problem 5: Cricket Score Analyzer**

A batsman played 10 matches.

**Task:**

1. Store runs scored in each match.
2. Calculate total runs.
3. Calculate average runs.
4. Find highest score.
5. Count how many times the player scored 50 or more runs.

**Sample Input:**

45 67 23 89 12 56 78 34 90 51

**Expected Output:**

Total Runs = 545
Average Runs = 54.5
Highest Score = 90
50+ Scores = 6
